DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Application No. 10/735,853 in the reply filed on 1/26/2005 is acknowledged. The traversal is on the ground(s) that certain non-elected groups contain similar features as the elected group. This is not found persuasive because, although these other groups contain limitations pertaining to shifting or tilting of a lens, each of these other groups separately claim distinct and different combinations of features which are not found in the elected group.

The requirement is still deemed proper and is therefore made FINAL.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 12/16/2003 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the lens tilt must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 28 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nishioka et al. (US Patent No. 6,464,363) in view of Sugawara (US Patent No. 5,986,806).

Nishioka et al. discloses an optical system including a deformable mirror and at least one lens. Though Nishioka et al. teaches that the deformable mirror may be asymmetric resulting in decentering aberrations, Nishioka et al. is silent to applying a shift and tilt to at least one lens or imaging plane in order to correct decentering aberration produced by the deformable mirror. However, Sugawara teaches a decentered optical system that may correct decentering aberrations by applying a shift and tilt to at least one lens in order to correct decentering aberrations produced by the deformable mirror, wherein the shift takes place in a certain plane and a rotary axis of the tilt is perpendicular to the plane. At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to combine the teachings of Nishioka et al. and Sugawara to provide a lens that can shift and tilt to correct decentering aberrations produced by the deformable mirror for better performance of the optical system.
